

# DRYING CABINET FOR PROTECTIVE WORKWEAR

Page | 1

**Personal protective equipment is used day in day out, intensively, and in greatly varying temperature and weather conditions. The result: wet clothes and boots. To start the next shift in comfortable attire, Pronomar is supplying an ingenious drying system.**

Pronomar's robust drying cabinets will dry your PPE the easy way. The clothing is dried from the inside out by means of warm air. The drying is fast and gentle, so that your valuable equipment receives the careful treatment it deserves.

cap dryer (optional)

(ozone) plasma ionizer (optional)

....and many more available

Air blower FLOW300

A warm and fast drying of all clothing by using a large amount of air, which flows through the continuous stainless steel framework and body-shaped hangers. The hangers contain nozzles, through which the air enters the clothing, reaching all areas from the arm pits to the tips of the boots. Customers choose for a drying cabinet for optical or practical reasons. Furthermore, the warm air stays inside the cabinet, ensuring a fast drying of both the inside as well as outside of the PPE.

The new warm air blower FLOW300 comes in a different and improved housing, that facilitates an easy filter change (tool-free). Next to that the blower is fitted with a regulating screw for a stepless regulation of the air volume (0-100) and with this also the temperature and sound can be set.

*For more technical details and information please see our product information on "Warm-air blower FLOW300".*
