

DRYING LOCKER FOR ALL SORTS OF WORKWEAR & PPE

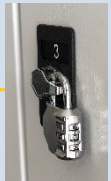

Page | 1

Optical and practical advantages are just two reasons why customers prefer a closed drying system over the standard wall- or floor-mounted configurations. They keep the change room tidy, hygienic and organised.

The drying principle is the same: clothes are dried from the inside out, either because the body-shaped hangers are connected to a warm-air blower (providing 200 m³ air per hour), or because the hangers are electrically heated.

- lockers are made of zinc-plated sheet steel
- built-up as double unit (of 2 lockers), together on one underframe
- 3 years warranty on locker units
- wide range of interior dryers available
- fitted drying systems can be made of stainless steel 304 or 316 (8 years full warranty)
- locker options:
 - slanted roof, range of locks, available in almost any RAL colour, personalized perforated logo and other options available
 - optional: on raise plinth (closed front)

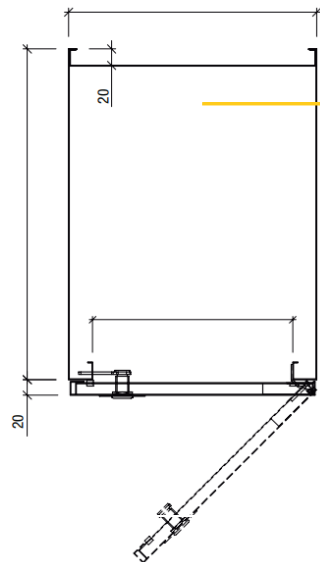

or

- + drying from inside-out
- + robust, nearly indestructible drying system
- + optical and practical benefits
- + maintenance-free
- + plug-and-play

Many different dimensions and interior fittings available!

You wear it,
we dry it!

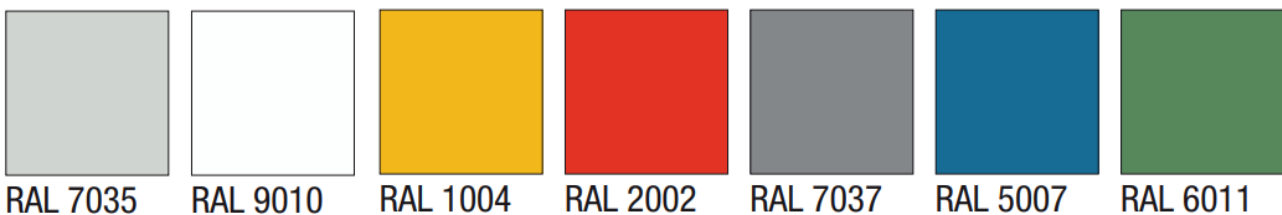

DRYING LOCKER FOR ALL SORTS OF WORKWEAR & PPE

Page | 2 When it comes to drying lockers (singular use) or drying cabinets (for up to 8 people's workwear), Pronomar has a wide range of options available. The customer can choose from a standard single-walled locker door (1 mm) up to a robust HPL door (12-13 mm). Also there is a range of locks available, from a padlock, permutation lock with central key function, up to an electronic locking system that enables you to translate your security policy into physical access control. Some companies, for example in the food industry, prefer to have a slanted roof for hygienic reasons. Lockers are optionally available with levelling feet, the company logo in the doors (acting as ventilation grids), a shelf for storing personal things and many more possibilities.

Standard locker colours:

- body: RAL 7035 light-grey, powder coated, rough structured paint, glossy
- doors: any of below RAL colours are available and without production surcharges
